

An idea for true representation in self governing of contradicting groups having their trademarks for governing their channels in projects or issues which are financed together.

How to avoid misrepresentation of contradicting groups and not being stuck with and sucked by misbehaving in their financing through donation tax and/or dividend?

Have 2 legal entities: one being a caretaker of projects and serving in financing the other, the logistic, being caretaker of membership of the population been cared of the channels per each project being financed and the owner of trademarks of the groups governing the projects, where

- the membership of the people, able to be in one of the groups, is done by the logistic, using one "membership" folder in each group while implementing iiaom protocol.
- each group at anytime can withdraw its trademark from the representing projects,
- group0 for individuals, channel0 for unsatisfied people and project0 for unrecognized projects are initiated as a default,
- the money flow is proportional to the population being served or represented by each project and
- one logistic could get flow from one or more finance but only for projects and never per channels of such projects, where channel0 is of groups having not yet their channel but the flow goes there considering the population.

Notes:

- criteria of projects are created such that in each criteria each member has only one identity for having democratic voting between the projects.
- each event of creating group or of member's movement between groups, must be immediately registered and be depended only on the member. This is really on unique identification of the members' union, implementable in the events of having new member or losing one.
- officials in the union must provide the history of all their jobs in the union.
- Example or formation:
  - The Humanitarian Home For Human Beings (HH4HB) is an association formed as a liquid union (see its constitution).
  - Its aim is assisting discriminated populations, like refugees and migrants, govern by the populations authentically and while avoiding misrepresentation, while focusing in reducing gaps created in unjust societies, such as the capitalistic ones, or any other society which value products, documents or religion, ethnic or cultural values more than humans.
  - Its Objectives are creating better transparency about the discriminations, like by providing radio and library together with documentation of the story of the migrant and refugees in such societies, while reducing the social gaps, by providing assistance in fields like law representation, health, food, hosting etc.

A concrete example: in concern of the refugees in berlin. Creating The Liquid Union of Refugees and Migrants in Europe: (which is openly coordinated with the 3:

\* <http://www.rav.de/> <- <http://www.rav.de/kontakt>

\* <http://www.kub-berlin.org/> <- <http://www.kub-berlin.org/index.php/en/contact2>

\* <http://www.via-in-berlin.de> <- <http://www.via-in-berlin.de/kontakt/> )

The idea is to have 2 legal entities (such as association), where

- one serving in financing the other (to avoid misbehaving in financing)
- as the other being the logistic is
  - A) caretaker over projects benefiting and govern by Refugees and Migrants.
    - Such projects of which some add some value to the local German community, such as for Refugees and Migrants between the frontex's borders the Refugees and Migrants
      - Radio and Library of the Refugees and Migrants
      - Documentation of their stories; and
  - B) owner of trade marks of groups of refugees being represented in those projects,
    - such that the groups could avoid misrepresentation by disallowing the use of their trade marks,
      - where the privileged is given to the members of the groups in the condition of the implementation of those privileges is made by the group.
