

The liquid union participant card

by namzezam under the Humanitarian Agpl License

The organization issues unique participant number for each participant bringing identity card and file of her/his pic.

The organization creates hash of the pic and print on one side these 4 elements:

- Pic of the participant,
- Hash of the pic,
- Qr of the Hash and
- Logo of organization,

and then seal these elements in plastic cover with back pocket for channel per projects.

Per each participant, the organization keeps only: identity number, participant id, hash and the channel per each of the projects.

From the organization, the channel gets only the hash of participant and give to the participant a paper for pocket showing the period of time for use by that participant with the symbol for the channel of project. Before any given service to participant having the channel in pocket of such card, the channel checks for the pic matching the participant and having the hash matching the qr(hash) .
